Load the data

```r
df <- read.csv("poisons.csv")

# poison and treatment are factors
df$poison <- factor(df$poison)
df$treat <- factor(df$treat)
```

Figures

```r
# Figure 1: Overall Histogram of Survival Time
 ggplot(df, aes(x = time)) +
  geom_histogram(fill = "skyblue", color = "black", bins = 15) +
  labs(title = "Distribution of Survival Times (Overall)",
       x = "Survival Time",
       y = "Frequency")
```

```r
# Figure 2: Boxplot by Poison Type
ggplot(df, aes(x = poison, y = time, fill = poison)) +
  geom_boxplot() +
  labs(title = "Survival Time by Poison Type",
       x = "Poison Type",
       y = "Survival Time")
```

```r
# Figure 3: Boxplot by Treatment Type
ggplot(df, aes(x = treat, y = time, fill = treat)) +
  geom_boxplot() +
  labs(title = "Survival Time by Treatment Type",
       x = "Treatment Type",
       y = "Survival Time")
```

```r
# Figure 4:survival Time by Treatment and Poison Type
ggplot(df, aes(x = treat, y = time, fill = poison)) +
  geom_boxplot() +
  labs(title = "Survival Time by Treatment and Poison Type",
       x = "Treatment Type",
       y = "Survival Time")
```
